

We are seeking a Backend Developer to build and maintain scalable server-side applications.

Required skills: Java, Spring Boot, SQL, Git, and REST APIs.

Knowledge of Docker and Kubernetes for containerized deployments is a plus.

The candidate should be comfortable working in a fast-paced Agile team and have strong debugging and problem-solving skills.

A B.E./B.Tech degree in Computer Science or Information Technology is required.

Experience required: 2+ years.
